EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicants' representative, RUTHLEEN E. UY, on 11/06/2006.

In the Claims filed 08/31/2006, please

REPLACE claims 1-3, 7-9, 13-15, 19-21, 25 and 26 by claims 1-3, 7-9, 13-15, 19-21, 25 and 26 (without underlined and cross marked), which were amended by examiner as below:

Claim 1. *A method for searching for data in one or more heterogeneous data sources within a computer system, the method comprising:*

receiving, from a user, a request for data at a federated datastore, wherein the federated datastore comprising a plurality of datastores and at least one of the plurality of datastores is a Domino Extended Search datastore;

selecting one of a plurality of Remote Method Invocation (RMI) servers to process the received request based on the load of the selected RMI server and based on whether the selected RMI server can satisfy the received request for data, said selected RMI server connected to one or more heterogeneous datastores; and

providing to the user data corresponding to the received request from the one or more heterogeneous datastores;

wherein the plurality of RMI servers form a server hierarchy;

wherein upon receiving a request to add an additional RMI server, connecting the additional RMI server to an existing RMI server in the server hierarchy based on a number of connections of the existing RMI server; and

wherein upon receiving a request to delete an existing RMI server in the hierarchy, deleting that RMI server.

Claim 2. *The method of claim 1, further comprising forwarding the received request to the selected RMI server.*

Claim 3. *The method of claim 2, further comprising forwarding additional requests for similar data to the selected RMI server.*

Claim 7. *An apparatus for searching for data in one or more heterogeneous data sources, comprising:*

a computer system having one or more heterogeneous data sources; and one or more computer programs, performed by the computer system, for

receiving a request for data at a federated datastore, wherein the federated datastore comprising a plurality of datastores and at least one of the plurality of datastores is a Domino Extended Search datastore;

selecting one of a plurality of Remote Method Invocation (RMI) servers to process the received request based on the load of the selected RMI server and based on whether the selected RMI server can satisfy the received request for data, said selected RMI server connected to one or more heterogeneous datastores; and

providing to the user data corresponding to the received request from the one or more heterogeneous datastores;

wherein the plurality of RMI servers form a server hierarchy;

wherein upon receiving a request to add an additional RMI server, connecting the additional RMI server to an existing RMI server in the server hierarchy based on a number of connections of the existing RMI server; and

wherein upon receiving a request to delete an existing RMI server in the hierarchy, deleting that RMI server.

Claim 8. *The apparatus of claim 7, further comprising forwarding the received request to the selected RMI server.*

Claim 9. *The apparatus of claim 8, further comprising forwarding additional requests for similar data to the selected RMI server.*

Claim 13. *An article of manufacture comprising a program storage medium readable by a computer system and embodying one or more instructions executable by the computer system to perform method steps for searching for data in one or more heterogeneous data sources within a computer system, the method comprising:*

receiving, from a user, a request for data at a federated datastore, wherein the federated datastore comprising a plurality of datastores and at least one of the plurality of datastores is a Domino Extended Search datastore;

selecting one of a plurality of Remote Method Invocation (RMI) servers to process the received request based on the load of the selected RMI server and based on whether the selected RMI server can satisfy the received request for data, said selected RMI server connected to one or more heterogeneous datastores; and

providing to the user data corresponding to the received request from the one or more heterogeneous datastores;

wherein the plurality of RMI servers form a server hierarchy;

wherein upon receiving a request to add an additional RMI server, connecting the additional RMI server to an existing RMI server in the server hierarchy based on a number of connections of the existing RMI server; and

wherein upon receiving a request to delete an existing RMI server in the hierarchy, deleting that RMI server.

Claim 14. *The article of manufacture of claim 13, further comprising forwarding the received request to the selected RMI server.*

Claim 15. *The article of manufacture of claim 14, further comprising forwarding additional requests for similar data to the selected RMI server.*

Claim 19. *The method of claim 1, wherein the load of the selected RMI server is based on at least the ratio of a current load of the selected RMI server and a maximum load of the selected RMI server.*

Claim 20. The apparatus of claim 7, wherein the load of the selected RMI server is based on at least the ratio of a current load of the selected RMI server and a maximum load of the selected RMI server.

Claim 21. The article of manufacture of claim 13, wherein the load of the selected RMI server is based on at least the ratio of a current load of the selected RMI server and a maximum load of the selected RMI server.

Claim 25. The method according to claim 1, wherein said federated data store comprises a virtual datastore which combines one or more heterogeneous datastores into a consistent and unified conceptual view.

Claim 26. The method according to claim 1, wherein said server hierarchy comprises a tree hierarchy.

Allowable Subject Matter

The above Claims 1-3, 7-9, 13-15, 19-21, 25 and 26 are allowed.
